

Vision System.

- Can be fitted to any vehicle.
- Visibility with ease, clarity & control.

How Vision Savure Works

This system offers visibility to the operator with comfort from the normal driving position.

The Camera is located and focuses on the area of sight required with an automatic iris compensating for the change in lighting conditions.

The pictures sent live to the TFT 5" flat screen located in a position so as not be obtrusive to any other operating function allow the driver to make adjustments to his lifting or reversing directions.

The system as well as adding a higher level of health and safety to the site may also reduce the amount of accident damaged caused by miscalculations made through human error.

The system is Multivoltage and will also work in cold stores as well as in yards.

Ideal for vehicles operating at height.

Technical Specifications

Voltage Range:	12V - 32V DC
Maximum Power:	10 WATT
Nominal Operating Temp:	-25° to + 50°c
Dimensions:	115mm x 170mm x 28mm
Ambient Condition:	Covered Use Only
