

Forklift Truck Overspeed Detection

What is Overspeed Detection?

Transmon's universal Overspeed Detection System monitors the travel speed of any forklift truck, drivers and co-workers are alerted when a set speed has been exceeded.

The Overspeed Detection System provides warnings only, it does not govern the engine speed or affect the performance of the truck.

Overspeed Detection

The system can be set to the required speed limit to suit your site's specific requirements. When the truck has reached a set speed limit it will automatically activate a beacon on top of the truck, a buzzer and an LED fitted inside the cabin will alert the driver. When the truck speed drops below the set limit, the unit will reset and the warnings will cease.

Features

- Hydraulic lifting performance is unaffected
- Fully adjustable, works in forward and reverse
- Suitable for LPG, Diesel and Electric powered forklift trucks
- Recommended for forklifts operating in areas used by pedestrians

Benefits to you:

- Increase site safety
- Helps to enforce a site speed limit
- Reduced fuel and environmental costs
