

# Forklift Truck Speed Limit Control

iTEch

## What is Speed Limit Control?

Transmon's universal speed limiters enforce new and old equipment to comply with site speed limits. An intelligent proportional control system is used to ensure hydraulic and incline driving performance levels are unaffected. Adaptive speed control can automatically apply drive speed restrictions when limiters are used in conjunction with Driver Assistance Systems such as proximity warning, pedestrian alert cameras, active reverse, wireless zoning and positioning systems.

## iTEch-7 Speed Limit Controller

The iTEch-7 Speed Limiter is suitable for ICE and Battery powered forklift and mobile plant with a Drive-by-Wire accelerator pedal. The programmable control system can enforce up to three different drive speeds.

## iTEch RSPC2 Speed Limit Controller

The RSPC2 Speed Limiter is suitable for ICE powered forklift and mobile plant fitted with a Mechanical-cable operated throttle pedal. The programmable control system provides retrofitting possibilities for older equipment with conventional throttle linkages, the control system can enforce up to three different drive speeds without loss of power.

## Benefits to you:

- Increased site safety
- Enforcement of site speed limit
- Reduced fuel and environmental costs
- Intelligent control systems, no loss of power
- Speedometer options for current speed indication
- Easy install, compatible with most OEM speed sensors
- Options for plug-and-play pedal wiring harness adapter
