Forklift Truck Overspeed Warner

What is Overspeed Warning Detection?

Transmon's universal Overspeed Detection System monitors the travel speed of the forklift truck, drivers and co-workers are alerted when a set speed has been exceeded.

The Overspeed Detection System provides warnings only, the driving aid system does not govern the engine speed or affect the performance of the truck. An optional Speedometer Display unit can be added to indicate the actual drive speed.

Overspeed Detection

The overspeed drive system can be set to the required speed limit to suit your site's specific requirements. When the truck has reached a set speed limit it will automatically activate a warning beacon and a driver buzzer/warning lamp fitted inside the cabin. When the truck's travel speed drops below the set limit, the unit will reset and the alerts will cease.

Features

- Hydraulic lifting performance is unaffected
- Fully adjustable, works in forward and reverse
- Suitable for LPG, Diesel and Battery powered forklift trucks
- Recommended for forklifts operating in congested areas, in close proximity to pedestrians
- Optional Speedometer Display unit

Benefits to you:

- Increased site safety
- Helps to enforce a site speed limit
- Reduced fuel and environmental cost
